

OpenText Freeway Cloud

The easy and affordable route to EDI connectivity for SMBs

Delivers easy and affordable connectivity

Increases transaction visibility

Improves processes for operations and shipping

Accommodates growth

When attracting customers and staying ahead of the competition, it is difficult for small and medium-sized businesses (SMBs) to accommodate an increasing number of orders and the mandates of large B2B trading partners. OpenText™ Freeway Cloud can quickly and easily move a business toward EDI connectivity with its B2B trading partners.

Electronic Data Interchange (EDI) is the computer-to-computer exchange of business documents in a standard electronic format between business partners. By moving from a paper-based exchange of business documents to one that is electronic, businesses enjoy major benefits, such as decreased costs, increased processing speed, reduced errors and improved relationships with business partners.

Delivers easy and affordable connectivity

Organizations can get connected in less than an hour and have the OpenText migration team perform setup, testing and training within a week, depending on complexity. Even non-technical staff will be using Freeway Cloud in no time, thanks to a simple intuitive interface. The solution requires no advanced knowledge or previous experience in EDI to operate, swiftly moving organizations to affordable B2B connectivity without dramatically shifting IT resources or hiring new personnel.

"The team at OpenText is very knowledgeable, approachable and was very helpful during the setup and since in providing support. We also feel assured that due to its global reach and scale, OpenText will be there today, tomorrow and well into the future to support us."

Richard Nuttall
Senior Plant Manager
Nichirin U.K. Limited

Increases transaction visibility

Businesses can elevate transaction visibility with a responsive web interface that quickly identifies the status of each document from a desktop computer or mobile device. The system can validate documents to reduce the likelihood of sending faulty transactions. The smart alert functionality further improves status management and allows users to get ahead of any issues that may affect business.

Improves processes for operations and shipping

Freeway Cloud offers a variety of capabilities that allow customers to better manage their operations and shipment processes. Cross-docking and drop shipping improve inventory management by supplying the data needed for advance planning of the shipping and receiving processes. Enhanced pick and pack capabilities go beyond standard case packing methodology to support more complex and often more efficient mixtures of goods in a given shipment.

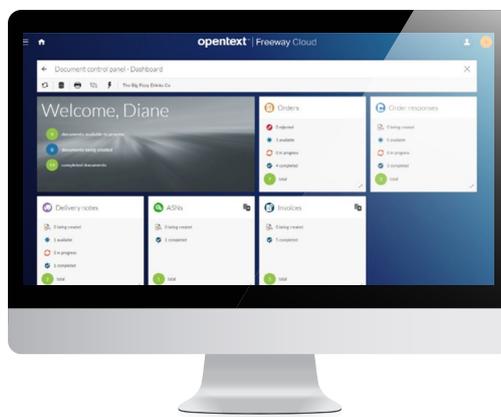

Accommodates growth

Organizations can quickly connect to new business partners using pre-built trading partner kits and with continuous investments in the Freeway Cloud platform, they can access the latest features and capabilities with cloud updates. In addition, OpenText offers a wide portfolio of B2B solutions suitable for larger businesses to help them take full advantage of a growing digital supply chain.

Provides consistent and reliable support

OpenText technical support staff are available to solve any issues that arise. With remote management capabilities, our support staff can access the system without a site visit or lengthy support calls.

OpenText Freeway Cloud is an easy-to-use and affordable EDI solution that removes barriers to electronic trading for small to medium-sized businesses. Join OpenText and the largest global B2B integration network with a wide portfolio of B2B solutions and gain a reliable partner, today and as your business grows.
